Education

10/2016- **Doctor of Philosophy in Physics**, *Paul Scherrer Institut and University of Fribourg, Switzerland*

09/2011- **Master Degree in Chemical Sciences**, *University of Modena and Reggio Emilia, Italy*

09/2009 Grade: 110 (out of 110) cum laude

09/2009- **Bachelor Degree in Chemistry** *University of Modena and Reggio Emilia, Italy*

09/2006 Grade: 110 (out of 110) cum laude

Schools and Workshops

11/2015 How to Write a Competitive Proposal for Horizon 2020, Paul Scherrer Institut, Villigen, Switzerland

01/2015 6th MaNEP Winter School, Shedding light on correlated electrons, Saas-Fee, Switzerland

04/2014 Lib4RI Training Series: Searching & Managing Scientific Information, Paul Scherrer Institut, Villigen, Switzerland

10/2013 Mott Physics Beyond The Heisenberg Model, Monte Verità, Switzerland

10/2013 EPICS Training - Controls Section, Paul Scherrer Institut, Villigen, Switzerland

08/2013 PSI Summer School on Condensed Matter Research (12th edition), Materials - structure and magnetism, Zuoz, Switzerland

Employment

01/2017- **Postdoctoral Fellow**, Massachusetts Institute of Technology, USA
now

01/2017- **PhD Student**, Paul Scherrer Institut, Villigen, Switzerland

04/2013 Main Duties:

- Group in-house research on strongly correlated systems (iron pnictides, nickelates, cuprates, iridates, ruthenates, vanadates etc) with resonant spectroscopies
- Collaboration and support to international users
- Several experiences abroad to conduct experiments not feasible in-house

03/2013- **Research Assistant Delprosens**, Modena, Italy

07/2012 Employed by Delprosens (<http://www.delprosens.com/>), spin-off of the University of Modena and Reggio Emilia (Italy), to work in the field of electrochemical sensing and in the application of such technologies in the industry.

Main Duties:

- Develop new electroic materials and relative electrochemical analytic methods
- Test and assembly of industrial grade prototypes (hardware and software)
- In-situ testing of the developed methodologies and devices

06/2012- **Research Assistant, Spinner 2013**, Modena, Italy

09/2011 Started working for Delprosens (<http://www.delprosens.com/>), spin-off of the Electroanalysis' Group of University of Modena and Reggio Emilia, (Italy) (<http://www.electroanalysis.unimo.it/>), with a fellowship provided by Spinner 2013 (<http://www.spinner.it>).

Main Duties:

- Discovery of novel electrodic materials and development of relative electrochemical methods
- Preliminary characterization of the new electrodic materials
- Design and construction of prototypes and devices working in industry

— PhD thesis

title **Resonant Inelastic X-Ray Scattering and X-Ray Emission Spectroscopy Studies of Iron Pnictides**

supervisor Dr. Thorsten Schmitt and Prof. Dr. Philipp Aebi

description I employ Fe-L edge Resonant Inelastic X-rays Scattering to study the behaviour of collective spin excitations in different families of iron pnictides superconductors, and as a function of doping and temperature. These studies are complemented with hard X-rays Fe-K edge Absorption and Emission experiments that give insights on the localized magnetism. An additional side project involves the use of Ni-L edge XAS-RIXS to investigate the electronic reconstruction of rare earth nickelates grown as thin films.

— Master thesis

title **Graphene-based electrode for the determination of Hydrogen Peroxide**

supervisors Prof. Renato Seeber and Dr. Fabio Terzi

description I synthesized a gold-graphene hybrid electrode with enhanced catalytic performances, and characterized it by means of electrochemical (static and cyclic amperometry), microscopic (AFM), and spectroscopic techniques (Surface Enhanced Raman Spectroscopy). The system was tested in the detection of hydrogen peroxide in several environmental conditions such as pH and matrices.

— Bachelor thesis

title **Electron transfer kinetics of mutated Azzuryne blue-copper proteins**

supervisors Prof. Marco Borsari and Dr. Antonio Ranieri

description Differently mutated Azzuryne blue-copper proteins have been absorbed onto a gold electrode and electrochemically characterized by means of cyclic voltammetry. The electrochemical data allowed the determination of thermodynamical and kinetical properties of these mutated proteins as a function of temperature, pH, and mutation. This allowed to partly elucidate the specific biological role of the amino acids in the native protein.

— Achievements

- Early PostDoc Mobility Fellowship from Swiss National Science Foundation
- Abilitazione all'esercizio della professione del chimico Sez. A (29-11-2011)
- Spinner Fellowship founded by Regione Emilia-Romagna (2011)
- Erasmus fellowship 2010-2011 for studying abroad
- Grant from Cassa di Risparmio di Cento founding projects abroad (2010-2011)
