## RESEARCH EXPERIENCES

### Investigation of High-Tc Cuprate Superconductors

- Synthesis of high quality  $HgBa_2CuO_{4+d}$  (Hg1201) single crystal by flux method (the transition width of  $T_c$  is less than 2 K)
- Annealing and characterization of Hg1201 samples with different doping levels (UD45K to OD90K) and Bi2223 samples
- Electronic structure of Hg1201 studied by ARPES
- Measurement of the physical properties of the overdoped Bi2223 by ARPES (Observation of tri-layer splitting and novel intra- and interlayer hopping and pairing)

### Instrument Development

- Maintenance of spin ARPES with mott detector and VUV 7eV
